Training Itinerary

**Day 1:**

9:00am - 9:15 am ......................... Sign-In
9:15am - 9:30 am ....................... Introduction
9:30am - 12:00pm ............. Computer Set-Up
12:00pm - 1:00 pm ............... On Site Lunch
1:00pm - 3:30 pm .............. Starting a Test
3:30pm - 4:00 pm ................. Q&A Panel

**Day 2:**

9:00 am - 9:15 am ......................... Sign-In
9:15 am - 12:00 pm ........ Reviewing a Test
12:00 pm - 1:00 pm .............. On Site Lunch
1:00 pm - 2:30 pm ................. Maintenance
2:30 pm - 3:00 pm ................. Conclusion
Course Keypoints

Software Set-Up
• Set-up Individual Privileges
• Exporting Data
• Creating Thermocouple Batch Files
• Software Overview

Starting a Test
• Specification Creation/Editing
• Specimen Creation/Editing
• Test Frame Preparation
• Start a Test

Review and Post Test
• Where to Find and Review Test Data
• Export Raw Data
• Reviewing Multiple Tests
• Modifying Tests

Maintenance
• Drawhead Maintenance
• Lever Arm Maintenance
• Troubleshooting
Course Descriptions

**Software Set-Up**
The WinCCS software set-up course will cover assigning users and an explanation on how to assign individual user privileges. Other topics covered include creating thermocouple batch files, setup of data export, and a general overview of the software.

**Starting a Test**
Topics will include creating Specifications, Specimens, and proper setup of your tester for the type of test you are running.

**Review and Post Test**
Topics discussed include how to review completed tests and tests that are currently running. This involves generating the data you and your customers are looking for, using the Export Data function, and reviewing multiple tests at the same time.

**Maintenance**
Properly maintain your tester(s). Topics include draw-head maintenance and lever arm maintenance to keep your testers running at their best. Additional topics include common troubleshooting practices for mechanical, electrical, and software upkeep.
ATS Service Department

Applied Test Systems (ATS) service technicians are available to provide in-depth product training to you and your entire staff at your facility or ours.

In addition to training, ATS technicians are available worldwide for your calibration/verification needs. We are ISO/IEC 17025-2017 accredited through A2LA, reassuring you accuracy, NIST traceability, and support throughout the lifespan of your equipment. We are capable of providing ASTM E4 verifications for force verifications, ASTM E1012 for alignment verifications, ASTM E83 for displacement transducer verifications, and thermocouple indicator verifications, all of which are applicable to lever arm test equipment.
