

Double Knife-Edge Alignment Coupling Series 4021

Applied Test Systems designs and manufactures a variety of standard and custom testing accessories for many of our products. Just like the equipment that they accompany, our range of grips, fixtures, compression plates, couplings, pull rods, and more can be fully modified and customized to suit a variety of testing applications. The Series 4021 double knife-edge alignment coupling is just one of many.

Features

- Minimizes specimen bending
- Precision construction
- Precision double knife-edge couplings designed to minimize specimen bending moments caused by misalignment in the testing machine
- Hardened and ground knife edges are rotatable and easily replaced
- Integral self-centering locator maintains precision alignment
- Available with either threaded or quick-change connections
- Other versions quoted upon request
